

Complete Vacuum Delivery System

# All-In-One, One For All

Kiwi's flexible stem and low profile cup facilitates proper placement & deliveries with **ALL** fetal head positions.

## All Positions, All Stations, All-In-One

**omnicup:** | amni-'kəp |

1. a vacuum delivery device that can be successfully used in **all** fetal head positions.

The chart below shows the success rates of the Kiwi Omnicup in different positions and stations.<sup>1</sup>

**POSITION**

**STATION**

**OVERALL**

## Align Smallest Diameter of Head

Unless the fetal head is presenting directly OA, a flexible stem is needed to position the cup over the optimal location (flexion point). This is necessary in order to flex the baby's head, which presents the smallest diameter of the head in line with the birth canal.

## Proper Placement With Flexible Stem

The key to any vacuum delivery is proper cup placement. Kiwi's low profile cup and flexible stem help ensure the cup is placed properly: allowing placement over the flexion point in **ALL** fetal head positions.

## Product Support

With Kiwi you will get more than a cup! Clinical Innovations provides a **5-Step Vacuum Technique** training to improve vacuum assisted delivery. Ask about a hands on simulation workshop.

## Ordering Information

| Product Description                        | Product Code | Box Quantity | Positions       |
|--|--------------|--------------|-----------------|
| Kiwi OmniCup with Traction Force Indicator | VAC-6000MT   | 5/ea         | OA, OP, OT, C/S |
| Kiwi OmniCup                               | VAC-6000M    | 5/ea         | OA, OP, OT, C/S |
| Kiwi Omni-C Cup                            | VAC-6000C    | 5/ea         | C/S             |
| Kiwi ProCup                                | VAC-6000S    | 5/ea         | OA              |

OA= Occiput Anterior OP= Occiput Posterior OT=Occiput Transverse C/S=Cesarean Section
